- C. [Update Database](#)
- D. [Upgrade from Previous Versions of Kaspersky Endpoint Security for Mac](#)

A. Download Kaspersky Endpoint Security 10 for Mac

1. You must have your OnePass password ready for download and registration.
2. **Your computer must connect to the campus network.** If you use your home computer, you must run [CUHK VPN](#) over your subscribed ISP network to connect your computer to the campus network.
3. Your computer must meet the system requirement as specified at <http://www.kaspersky.com/endpoint-security-mac>
4. Go to the [download](#) page to download Kaspersky Endpoint Security for Mac Version 10.1.0.622:
 1. Programme File
 2. Activation Code
5. You will be redirected to License Agreement page. Read the agreement carefully and click "I AGREE" if you accept this agreement.
6. Fill in the registration form for verification.
7. Upon completion of the form, click "Submit form" to proceed verification.

B. Install Kaspersky Endpoint Security 10 for Mac

Before installation, you should first

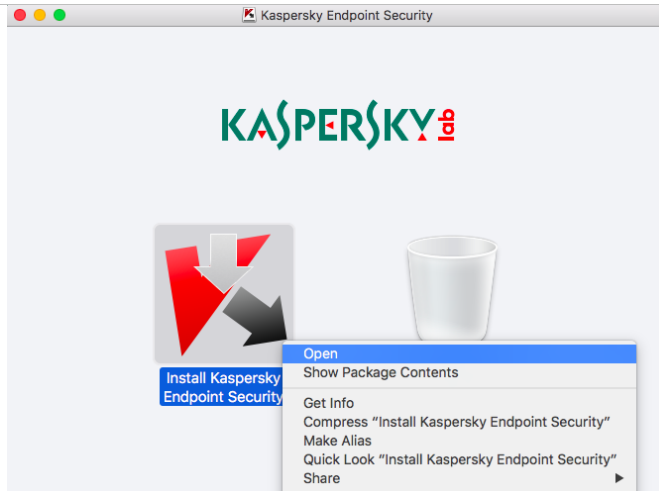

1. Back up your important files in other media like USB hard disk so that you can retrieve your data files in case of corruption during the installation. (Recommended)
2. Disconnect your current Campus Network or other Internet connection.

3. Uninstall your current version of Kaspersky or any other anti-virus software. Ref: part D. Upgrade from Previous Versions of Kaspersky Endpoint Security for Mac
4. Restart your computer (without any network connection) before installing Kaspersky Endpoint Security for Mac Version 10.1.0.622.

1. Double click the zip archive file to extract software installation package. Then double click the installer file "kesmac.dmg" inside the extracted folder.

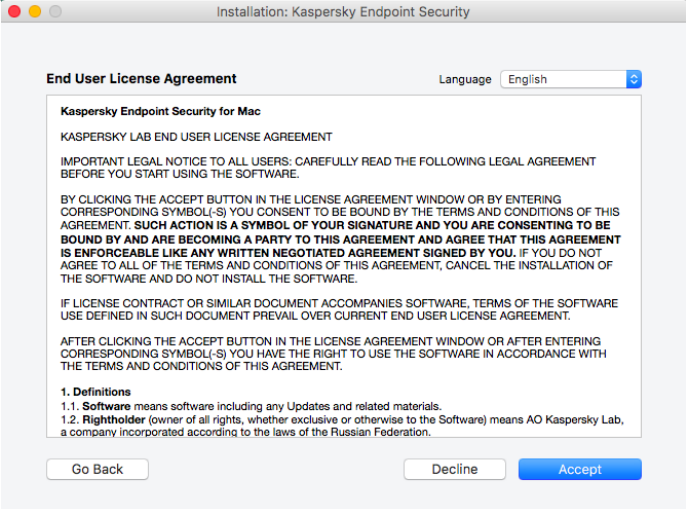

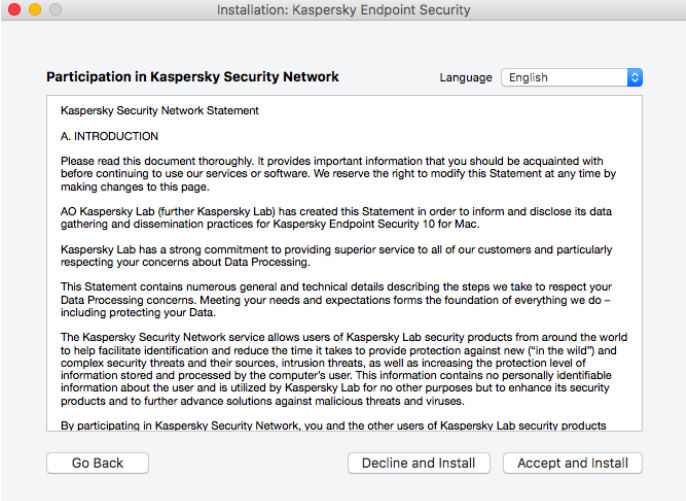

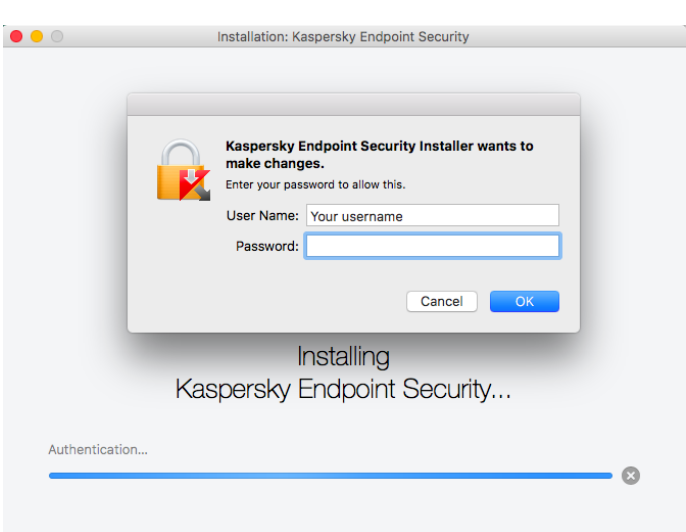

2. **Control-click** or **right click** the **Kaspersky Endpoint Security** icon.

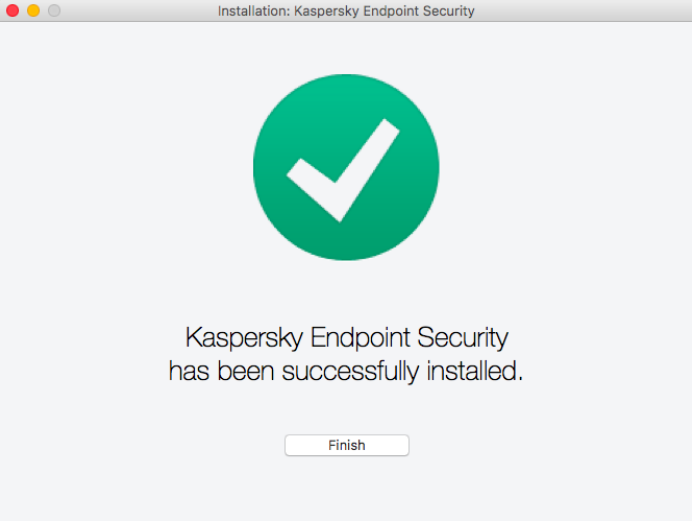

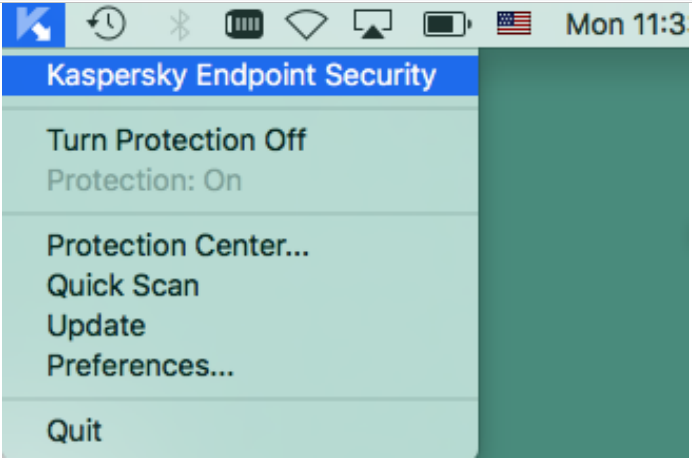

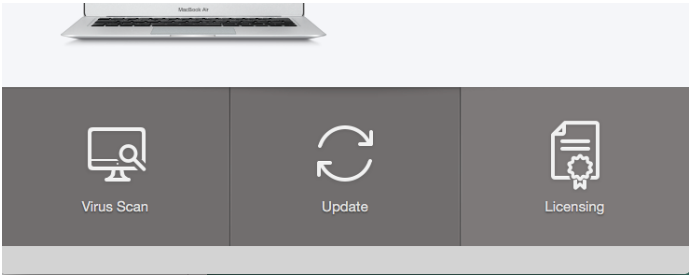

Press **Open** to continue.

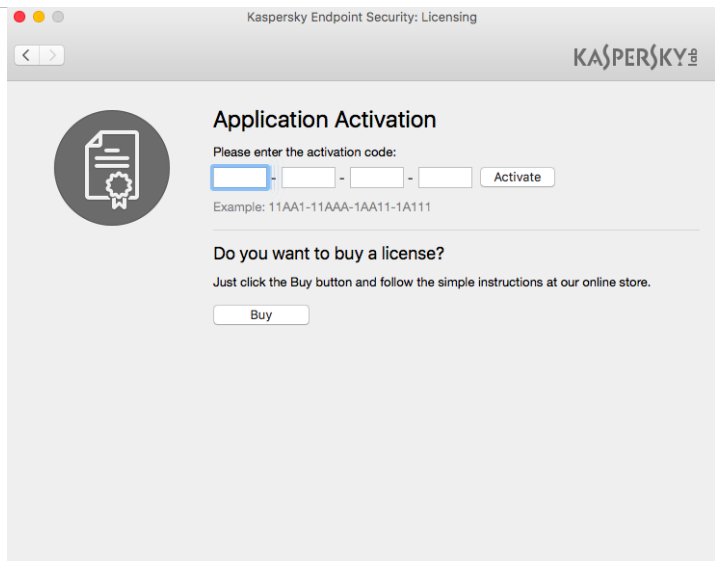

3. Press **Continue** button.

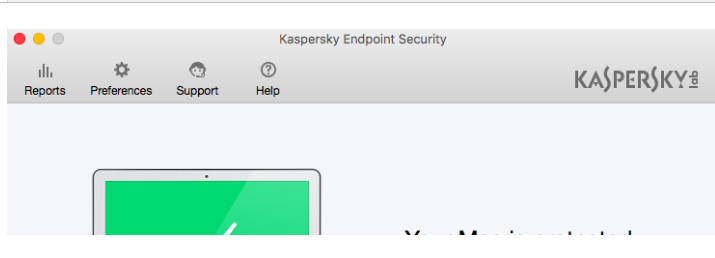

<p>4. Read the End User License Agreement.</p> <p>Press Accept to continue.</p>	
<p>5. Check Accept and Install. We recommend you to participate the Kaspersky Security Network to get a better protection.</p>	
<p>6. Type in your computer user password and press OK.</p>	

<p>7. Click Finish to continue.</p>	
<p>8. The Kaspersky Endpoint Security icon will be shown on Menu Bar after several seconds. Click Kaspersky Endpoint Security icon from Menu Bar.</p>	
<p>9. Click the licensing icon.</p>	

10. The activation code is available in our [download webpage](#). After entering the activation code press **Activate**. The Status will show “**active**” if the activation is successful. Click the back narrow button to continue the setup.

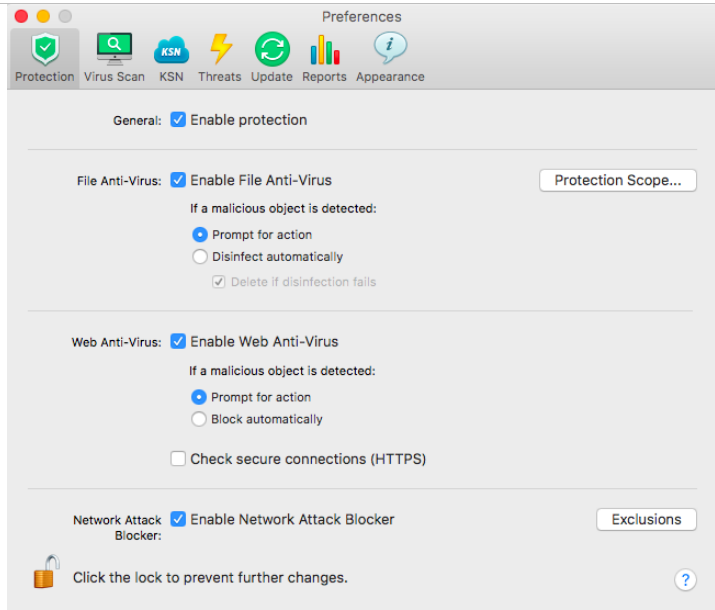

11. Click **Preferences** icon.

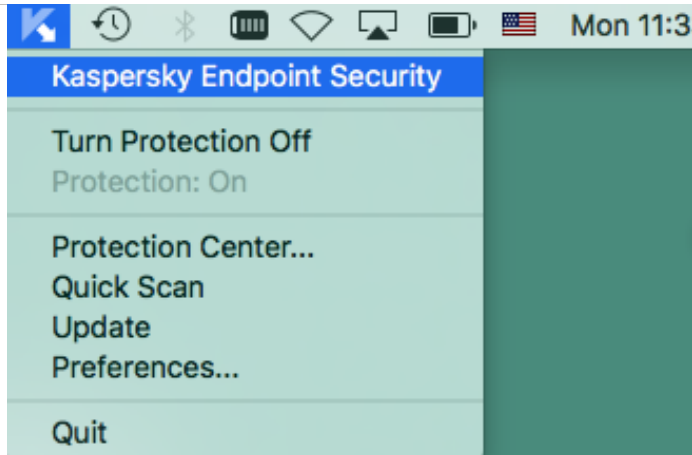

12. In the tab "**Protection**", click Protection Scope, then uncheck “**All Network Drives**”.
P.S.. Even “**All Network Drives**” is not in protection scope, Kaspersky Endpoint Security will still protect users from opening a known virus infected file in network drives.

Finish installation.

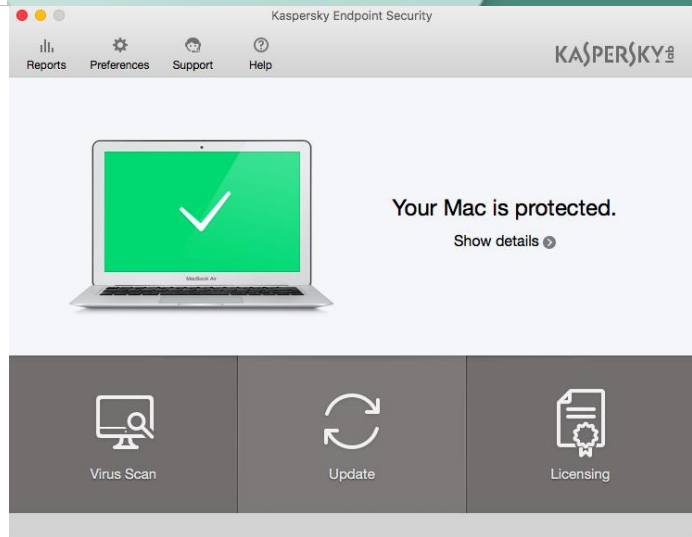

C. Update Database

1. Click Kaspersky Endpoint Security icon from **Menu Bar**.

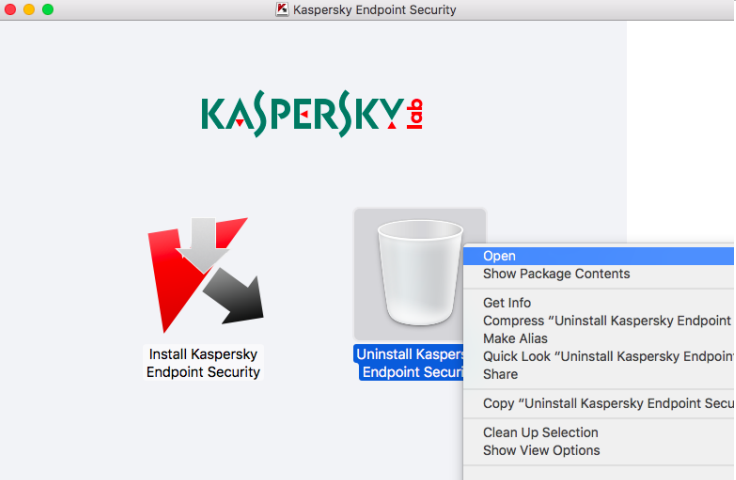

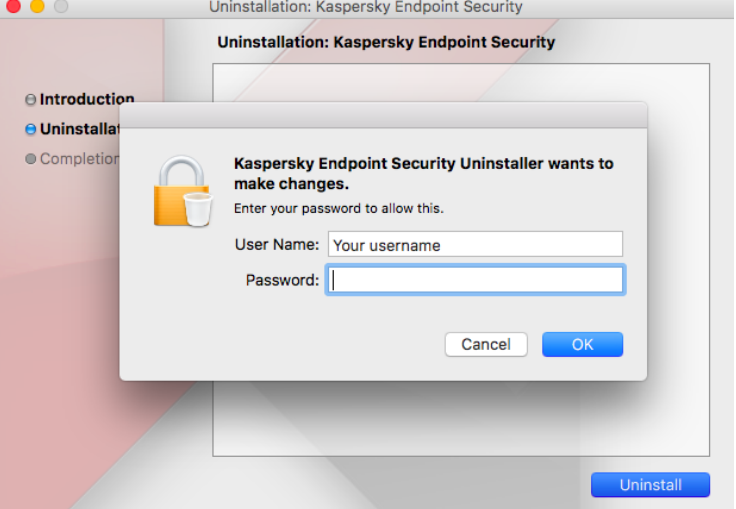

2. Click **Update** icon and press **update** to finish the process

D. Upgrade from Previous Versions of Kaspersky Endpoint Security for Mac

Before upgrade, you should first **uninstall the older version of Kaspersky Endpoint Security for Mac**. Follow steps 1-6 below.

1. Double click installer file "kesmac.dmg" of Kaspersky Endpoint Security 10 for Mac.

<p>2. Control-click or right click the Kaspersky Endpoint Security Uninstaller icon.</p> <p>Press Open to continue and click uninstall when the uninstallation window is prompt.</p>	
<p>3. Key in your computer user password.</p> <p>Then, press OK.</p> <p>click Done button to continue.</p> <p>Restart your computer to complete the uninstallation.</p>	

After the uninstallation of the older version of Kaspersky Endpoint Security for Mac, follow the instructions in [Part B here](#) to complete the upgrade.
