

## **Ways to check supported versions on mobile systems**

The following mobile OS versions supported TLS1.2 by default:

- Android OS versions: Android 10.0 and greater
- iOS versions: iOS 14.0 and greater

If you are running a supported OS on your mobile device, no action is required. Otherwise, you are recommended to upgrade it to the supported version.

To check which version of your mobile OS, please refer to the steps in below.

### **1. To check Android OS version:**

- Open your phone's **Settings** app.
- Near the bottom, tap **About** phone, then Android version.
- Find your "Android version".

### **2. To check iOS version:**

- Open your phone's **Settings** app.
- Tap General, then tap **About**.
- Find your "iOS version".
